The Santina™ Whirlpool Spa
Specifications

The Santina, by Jacuzzi Whirlpool Bath, is a spacious octagonal whirlpool spa which will seat up to seven people with room to spare. Designed to provide the revitalizing hydromassage for which Jacuzzi Whirlpool Bath is famous, the Santina features five directionally adjustable whirlpool jets and six high volume fully adjustable PowerPro® jets located strategically about the spa. The Santina also features a Water Rainbow® spout with flow control which creates a dazzling waterfall effect, as well as an underwater light with interchangeable colored lenses.

For convenience, a clearly labeled control panel allows push button control of the integrated heater, filter, whirlpool and air blower functions, as well as thermostatic control of water temperature from inside or outside the spa. The Silent Air Induction feature may be adjusted by means of the control knobs. A fully programmable schedule can be set for automatic control of temperature and filtration.

The Santina features two patented front load skimmer/filters which make up the 50 square foot filtration system. This system has been designed by Jacuzzi Whirlpool Bath to allow easy access to the filter cartridge without the need to drain the spa or open the skirt door. The spa shell, which is foam insulated to reduce energy costs, is tastefully surrounded by a handsome factory installed redwood skirt.

All necessary equipment of the Santina is mounted within the perimeter of the shell, making the spa easy to install. The spa requires a separate 230 VAC, 50 AMP, grounded GFCI (Ground Fault Circuit Interrupter) protected circuit. The Santina is available in several lustrous acrylic colors with color-coordinated fittings. Refer to the Jacuzzi Whirlpool Bath Color Guide.

Positioning Your Spa
You can locate the Santina just about anywhere you wish — on a deck, patio, or even indoors. Be sure to position it above ground in an area with good drainage, and on a level, continuous surface which can support the weight of the spa. This weight is approximately 4203 pounds (92 pounds per square foot) including spa, water and people. You must also provide access to the spa’s equipment for service and general maintenance.

Options
- Gas Heater
- Insulating Cover
- Pillows
